The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinal inhabin activity, chemotactic/chemokinetic activity, haemostatic and therapy.
                                                                                                                                                                                                                                                                                                                                                  (AGEN-) AGENSYS INC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WO200218578-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Homo sapiens

The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a composition comprising a substance that modulate the status of 85P1B3, where the status of a cell expresses 85P1B3 gene product is modulated. Also included are a composition comprising a peptide region of 5 amino acids of the 85P1B3 protein,
                                                                                                                                                                                                                                                                                                                                                                            Local Sim.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as planeimer's, Parkinson's disease, Huntington's disease, amyotrophic plateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity such as: Immune system suppression, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   26-JUL-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo sapiens

cc modulate the status of 85P1B3, where the status of a cell expresses cc modulate the status of 85P1B3, where the status of a composition cc 85P1B3 gene product is modulated. Also included are a composition cc comprising a peptide region of 5 amino acids of the 85P1B3 protein, in cc comprising a peptide region of 5 amino acids of the 85P1B3 protein, in cc cmy whole number increment up to 229 that includes an an position cc endytophilicity profile, an an position having a value greater than 0.5 in the cc composition having a value greater than 0.5 in the protein accessible residue profile, an an aposition having a value greater than 0.5 in the sylvancial color of the hydropathicity profile, an an aposition having a value greater than 0.5 in the beta-turn profile; a cc polynucleotide that encodes analogue peptide of 8, 9, 10 or 11 contiguous cresidues of the 85P1B3 protein; a recombinant protein comprising the cc animal that produces an antibody specific to the 85P1B3 protein; a recombinant protein comprising the cc animal that produces antibody that binds to the 85P1B3 protein; a vector comprising a polynucleotide that comprises the variable domains of the heavy and monoclonal antibody specific to the protein; a vector comprising a polynucleotide that encodes the whb; inhibiting growth of cancer cells or treating a patient who bears cancer cells that expresses the protein, antisense polynucleotide to the polynucleotide, cc ribozyme that cleaves the polynucleotide to the polynucleotide, cc ribozyme that cleaves the polynucleotide and T cells that expresses cc comprises an antibody specific to the gromamalian immune response to the protein exposing cells of the mammalian immune system to comprise the protein exposing cells of the mammalian immune system to comprise the protein exposing cells of the mammalian immune system to comprise the protein exposing cells of the mammalian immune system to confide the formulation and caposition.

Cc delivering a cytotoxic agent conjugate. The methods are useful for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; cytostatic;

                                                  clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful length clones were obtained by construction of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA enable the production of the full length enriched cDNA enable the production of the full length without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      08-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       growth of cancer cells or treating a patient who bears cancer cells that expresses the protein, for generating a mammalian immune response directed to the protein, for detecting the presence of the protein or polymucleotide in a biological sample in a patient who has or who is suspected of having cancer and for monitoring 48PBBB in a biological sample from a patient who has or who is suspected of having cancer. The gene for 85PBB is located on human chromosome 15q14. The present sequence is the 85PBBB protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (HELI-) HELIX RES INST.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Homo sapiens

protein

The present sequence is a human protein. The human protein, preferably originated from tumour cell line, is applicable as a drug, a reagent for studying intracellular protein networks and a protein source for screening proteins for binding low molecular weight drugs. The human protein coding the screening proteins for binding low molecular weight drugs. The human

for

ng proteins for binding low molecular weight drugs. The human coding sequence is useful for gene diagnosis and gene therapy, ion vectors and transformant cells for detection of ligands and

The present sequence is a human protein originated from tumour cell line, is apported in a studying intracellular protein networks a

                                                                            The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB5300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent patent wo200177334 (published 18-OCT-2001) which is available in electronic format directly from wIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      29-AUG-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AA008972 standard; protein;
                                                                                                                    The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The prolynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating e.g. stem cell growth factor activity immunormodulatory activity and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human polypeptide SEQ ID NO

of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the coligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence'3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by
                                                                                                                                                                             nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a
                                                                                                                                                                                                         complementary strand of a polynucleotide which comprises one of the 5602
                                                                                                                                                                                                                        The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the
                                                                                                                                                                                                                                                                                                           Claim
                                                                                                                                                                                                                                                                                                                                                          diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     29-JUL-1999; 99JP-00248036.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonuclectides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Local
                                                                                                                                                                                                                                                                                                        Å,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             50
```

The present invention provides the protein and coding novel human proteins. These were isolated from express (ESTs). They can be used to stimulate cell growth, to haematopoiesis e.g. to treat aplastic anaemia, to help

from expressed sequences growth, to regulate mia, to help tissue regrowth

                                                                                                                                                                                                                                                                                          28-JUL-2000;
The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602
                                                                                      Primer sets for synthesizing polynucleotides, particularly the 5602 full-
length cDNAs defined in the specification, and for the detection and/or
diagnosis of the abnormality of the proteins encoded by the full-length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    comprimentary became of a polynucleotic complementary to a sequence and an oligonucleotide comprises a 3'-end sequence, where the polynucleotide comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH13672 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent particularly acid sequences; and AAH13629 to AAH13632 represent particularly acid sequences; and AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combin of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     through detection of mutations in the associated gene, and for chromosome localization studies, and tissue expression studies. FHARI antibodies are useful to isolate and to identify clones expressing the polypeptides, or to purify the polypeptides by affinity chromatography and to treat cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 664 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the

chfr gene (see AAF30352) in human cancer is theorized to underlie the increased sensitivity of cancer cells to antimitotic drugs. Polypeptides acids 31-103, 303-346 and/or 476-641 of this sequence, are claimed methods of determining the tumourigenic potential of a cell comprise examining the cell for the presence of Chfr-mediated ubiquitin-protein ligase activity (in both upon exposure to microtic stress). A diagnostic kit for detecting the tumourigenic potential of a cell cases, absence of expression indicating predisposition to tumourigenesis tumourigenic potential of cell cases, absence of expression indicating predisposition to tumourigenesis tumourigenic potential of cell cells comprises may comprise a ligand that are identified by monitoring their effect on Chfr expression, and are used to retard the growth of cancer cells
Sequence
                                                                                                                                                                                                                                                                                                                                                               naving a torkhead associated domain (FHA) and a ring finger domain. The protein is required for regulation of the transition of cells from prophase to metaphase during mitosis. It has ubiquitin-protein ligase activity. The Chfr checkpoint was evident in primary human cells, but we inactivated in 4 of 8 human cancer cell lines. In U2OS cells, a mutatior was identified that caused a Val to Met amino acid substitution in the highly conserved C-terminal Cys-rich region of the Chfr protein. In the absence of the Chfr checkpoint, cells subjected to mitotic stress condensed their chromosomes despite failing to separate their chromosomes. Chfr may monitor centrosome separate to separate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acid sequence of mitotic checkpoint gene encoding a checkpoint with forkhead-associated domain and ring finger protein, diagnosing tumorigenic cells and in screening for anticancer drugs.
                                                                                                                                                                                                                                                                                                                                             chromosomes. Chfr may monitor centrosome separation.

identification of mutations methods of peventing, treating or and/or monoclonal antibodies for carrying out the methods of the invention. The invention; methods for the identification of compounds of the control of the invention; methods for the identification of compounds that modulate the expression or activity of the polymucleotide and/or polymediate the contig sequences corresponding to the cDNA sequences of the invention of (ADC31861-ADC32627) and the polymediates encoded by the contigs (ADC32628 -ADC33394). The nucleic acids and polymeptides of the invention are cuseful in diagnostics, drug screening, forensics, gene mapping, in the identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are calso used for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polymeptides
                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tang TY,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to 971 novel human cDNA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention, an antibody against a polypeptide of the invention; a method of detecting polypucleotides or polypeptides of the invention, and methods of the invention and methods of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polynucleotide and polypeptide useful for diagnosing, preventing treating conditions such as neurodegenerative diseases, anemias, plat disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases of the conditions of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                N-PSDB; ADC32051.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO2003029271-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         primers, and in the recombinant production of a protein. The polypeptide are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a human contigencoded polypeptide sequence used in an example of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (HYSE-)

contributions of the sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(C (1) a vector comprising a promoter operably linked to the nucleic acid cencoding a polypeptide whose expression is inhibited by the antisense curleic acid; (4) a host cell containing the vector; (3) an isolated continued are:

(C antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular crompound that influences the activity of a gene in an operor required for proliferation; (7) identifying a compound that influences the activity of identifying a gene product or that has an activity against a biological pathway crequired for proliferation, or that inhibits cellular proliferation of identifying a gene required for cellular proliferation or the biological pathway in which a proliferation required gene or its gene product its compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene context of the strains is present in a culture or collection of the strains; or (13) identifying the target of a compound that inhibits the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         21-MAR-2001; 2001US-00815242

                                                                                                                                                                                                                                                                                                                                                                                                                                                 proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
